Exelixisnet IT Support Setup guide

Remote support from Exelixisnet, in a few steps.

With the Exelixisnet IT Support app our technician sees your screen and helps you remotely. Connections go only through our own secure server.

Scan with your phone or open the link

Windows

For PCs and laptops

rustdesk.exelixisnet.gr/get/quick

Android

For phones and tablets

rustdesk.exelixisnet.gr/get/android

Quick help

Open the app and read the ID and password to the technician. When you close it, nothing stays installed.

Permanent support

Install the app once. After that we can help whenever you need it, without you doing anything.

Installing on Windows

1

Download the app

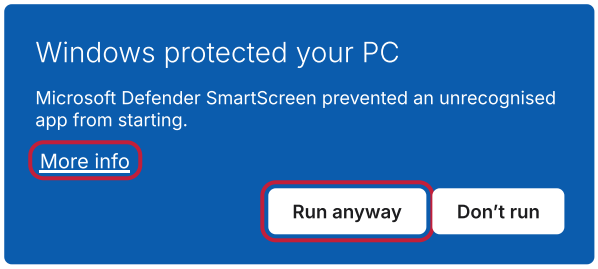

Open the link we sent you or scan the QR code on the first page. Open the downloaded file.

2

Allow it to start

If Windows shows a blue warning, click “More info” and then “Run anyway”.

3

Tell us the code

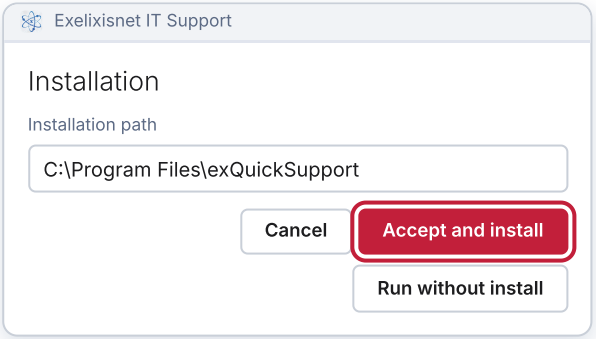

The app opens and shows an ID and a one-time code. Call us on 2615 00 2000 and read them out. Once we connect, you can watch everything we do.

4

Permanent access (optional)

So we can help whenever you need it without you running the file each time, click “Accept and install”. It starts on its own with the computer.

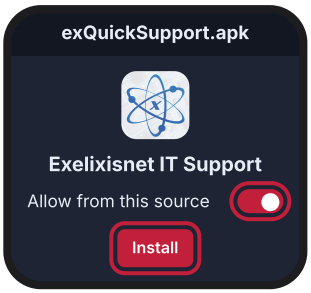

Installing on Android

1

Download and install

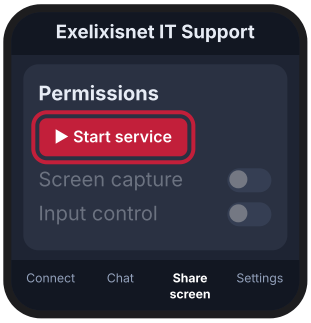

Open the link or scan the QR code. If asked, allow “Install unknown apps”, then tap “Install”.

2

Start the service

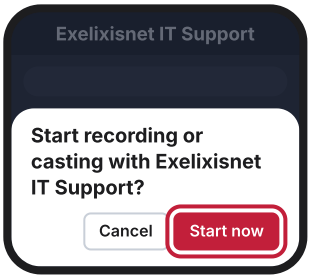

Open the app, tap “Share screen” at the bottom, then “Start service”.

3

Allow screen recording

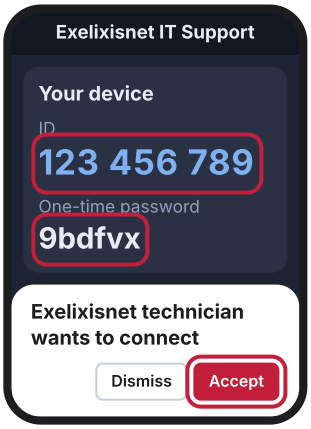

In the phone’s prompt tap “Start now”, so the technician can see your screen.

4

Read out ID and password

Tell the technician the ID and the one-time password. When they connect, tap “Accept”.

> Open the “Guide” tab inside the app and tap each row until it turns green — that grants every permission (screen, control, files) so we can connect right away.

Security: We connect only when needed for your support. You can uninstall the app at any time from Settings → Apps.
